

Mobile Developer

Who we are:

We are an earlystage startup founded by a mix of engineers and designers. Our team has a passion for developing novel and unique systems that have a direct impact on peoples' lives.

Findster, our first product, is a new and innovative location system for children and pets that, contrary to other location systems on the market, doesn't require the payment of any monthly fees. Findster broke several geographic barriers being one of the first Portuguese technologies to be featured on TechCrunch and backed by more than 800 contributors from more than 50 countries.

We are currently looking for hardworking and motivated individuals who are interested in expanding their career horizons and mobile development skills.

We are currently looking for a web developer to join our team in Oporto, Portugal.

To do what:

- Collaborate in our mobile apps development.
- Enhance users experience by improving our analytics and mobile platform.
- Develop components/services to communicate with our backend APIs.
- Opportunity to work with one of the hottest start-ups.

Our ideal andidate has:

- Passion for creating novel and unique systems that have a direct impact on peoples' lives.
- Good communication skills, intellectual curiosity, natural leadership, winning personality and startup mentality.
- Capable of designing new features by applying the appropriate Design Patterns, and Object Oriented Programming concepts
- Solid mobile development skills.
- Experience with Java Programming language and Android SDK
- Experience with Objctive-C Programming language and iOS development
- Understands the best practices of mobile app design.
- Knowledgeable about working with RESTful web services.

- Experience with version control in a team environment (Git, SVN).

We offer:

- A stimulating environment with room for creativity
- To work on innovative solution that have an impact on peoples lives
- A bright future at a promising high tech startup company

Bonus point for:

- Experience with Javascript Frameworks (AngularJS, emberjs).
- Building web applications and services.
- Knowledge of HTML5, CSS, jQuery, JSON.
- Experience with PHP frameworks.
- Experience with SQL/NoSQL databases.
- Knowledge in Windows Mobile Apps
