

Junior DevOps Engineer

Salary: Competitive

Location: Leiria, Portugal

Date: January 2021

Glartek, founded in 2017, is a fast-growing leader in Augmented Reality (AR) solutions for the Manufacturing Industry and our mission is to increase the efficiency and safety of production and maintenance processes. Our software solutions combine the AR and Internet of Things (IoT) domains to bring visibility, optimization and reassurance of field operations. Glartek has offices in Lisbon and Leiria, Portugal. The company has very large customers such as EDP and Renault and have raised over €1.5M in venture capital. For further information, please see www.glartek.com.

This is a fantastic opportunity to be part of the growth of the company, reporting directly to the engineering team. This intense and demanding role will require you to be involved in all different projects and technologies. As the ideal candidate, your goal is to be a versatile, high-energy and problem solving driven. You will be involved in fast-paced day-to-day environment. Last but not least, you will be empowered and accountable for a wide range of initiatives, which will give you the opportunity to own your career path and shape the future of Glartek.

Duties and Responsibilities

- Work alongside the development teams in the platform's solutions
- Implement an architecture that is resilient, scalable, secure and fault tolerant
- Put in place the necessary tooling to promote process automation in the management of the platform
- Seamless rollout of new service releases
- Ensure service continuity, platform resilience and service uptime
- Collaborate with other team members from different functions to ensure alignment and fluid operations
- Identify improvement opportunities
- Promote overall quality of the solution and ensure high performance
- Drive adoption of best practice in a way that does not come across as overhead
- Document the solutions and flows

Required Skills and Knowledge

- knowledge of programming/scripting languages (e.g. bash, shell, python, go)
- Good knowledge about Linux administration, network, OS and image hardening, security, app/services containerization and cluster management
- knowledge of CI/CD tools, repositories and pipelines
- Managing logging, metrics, monitoring and alert systems
- Proficiency in the English language, both written and verbal
- Ability to work autonomously but reach out immediately if blocked
- Positive and solution-oriented mindset
- Effective communication skills: Regularly achieve consensus with peers and clear status updates
- An inclination towards communication, inclusion, and visibility
- Demonstrated ability to work closely with other parts of the organization

Perks

You will benefit from regular team building activities, a relaxed culture, flat hierarchy, flexible holidays, flexible working hours, remote work, growth and development opportunities, health insurance, annual bonus based on company performance and a modern office close to public transportation. Last but not least, you will be working on a ground-breaking product, where you can use your creativity and knowledge to help solve challenging technical and social problems.
